## PROJECTS

---

### FOOD ORDERING SYSTEM

[Git](#) | May 2024 - Present

- Developed multiple RESTful APIs using Java Spring Boot for entities such as Restaurant, Food, and Cart, enhancing the functionality and user experience of the application.
- Implemented Spring Security with JWT tokens to manage role-based access control, which reduced server load for authentication-related tasks by up to 30-50%.

### BOOK RECOMMENDATION SYSTEM

[Git](#) | Jan 2024 to March 2024

- Developed a book recommendation model using Python, leveraging collaborative filtering to identify the top 5 books based on ratings from a large dataset.
- Utilized Flask to manage the backend and implemented a simple user interface for the system.

## INTERNSHIPS

---

### SOURCE ONE

PUNE, INDIA

Data Analyst

Oct 2023 - Jan 2024

- Boosted top management efficiency by 10% by developing a Cohorts chart to track daily business statistics, highlighting growth in sales and profits.
  - Decreased workload hours for various organizational sectors by creating a Business Dashboard in Looker Studio, reducing data reload time to under 5 minutes.
-
